

At Cytiva, we keep our legacy in motion by living our core beliefs. We are never satisfied with being satisfied and we constantly insist on being more tomorrow than we are today.

Cytiva is one of Umeå's largest employers. Our heart beats for Umeå – but we work globally. Every month 500 employees build, test and ship 1700 units of hi-tech laboratory equipment that our customers around the world use for medical research and pharmaceutical manufacturing. If you are looking for international career opportunities or in-house advancement – this is the place to be.

### Co-op at Cytiva

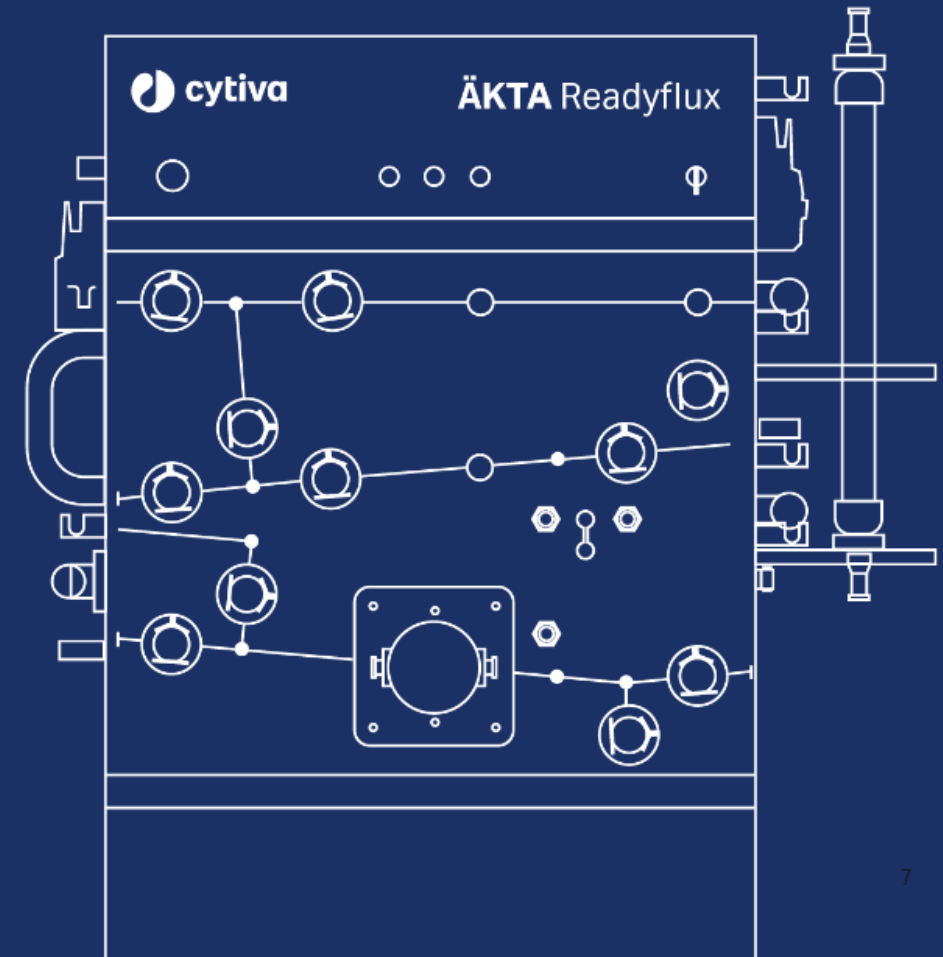

During two summers of paid work, we offer you participation in interesting projects, an exciting mix of theory and practice, a personal mentor and a possibility to create an extensive network of dedicated Cytivians both on-site and globally. You are then given the opportunity to make real contributions to site development through your thesis project.

CO-OP is the first step into our global organization, where the career possibilities are endless. This year we're seeking one Co-op for our Materials department and one for our Logistical department.

We are looking forward to receiving your application!
